

Inside of the Live Stream

Features and Settings inside of the Live Stream

Even within the Live Stream, there are several icons, tools, and settings that are available to attendees. Below is a chart that contains the different features and their corresponding functions inside of the vLive Stream. Following the table will be a labeled diagram explaining the locations of each feature. Please note: Some of these features will need to be configured for them to display within the Live Stream.

Top Banner	The sponsor banner will display across the top of the Live Stream. The sponsor banners are assigned to desired Live Streams and can be hyperlinked to open another page. The banners must be uploaded to the Sponsor Ads page before they can be assigned to a Live Stream.
Content Display	Once the Live Stream event has begun, the content will display on screen. You will be able to hear and see everything in live-time.
Volume Control	This button allows for control of the output volume. Attendees are automatically muted when they join the Live Stream, so this solely controls the volume of the speaker.
Full Screen Button	In the lower right corner of the content display, the user has the option to view the presentation in full screen. This will hide the Audience Response System from view.
Bottom Banner	This banner will display across the bottom of the Live Stream. The sponsor banners are assigned to desired Live Streams and can be hyperlinked to open another page. The banners must be uploaded to the Sponsor Ads page before they can be assigned to a Live Stream.
Audience Response System	The Audience Response System is another optional add-on that can display on the right side of the Live Stream event. This allows attendees to ask questions during a Live Stream, chat with each other using the Discussion Board, or Polling.

Audience Response System: Help Tab	The Help Tab of the ARS is designed to provide guidance and support to attendees on the features and functionality of the Audience Response System.
Audience Response System: Questions Tab	By clicking into the Questions tab, attendees will be able to see both answered and unanswered questions from other attendees. Optionally, you can configure a voting feature where attendees spend points to bring other attendee's questions to the top of the list.
Audience Response System: Discussion Tab	The Discussion tab allows attendees to interact with one another for casual conversation that may or may not be related to the presentation. The discussion can be used to give a more personal experience in Virtual Events.
Audience Response System: Polling Tab	Polling is a feature that will become available soon. Polling will be used to get opinions from the attendees and allow for further engagement within the presentation.

Please Note: The Audience Response System(ARS) is an additional Add-On that can only be used in conjunction with Live Streaming if it has been purchased. Please contact your Project Manager to learn more about the Audience Response System Add-On

Ask Question

100 / 100 Pts

Brad S.

65 pts

If a client has 100 presentations, can they technically have a video chat for each presentation... so 100 video chats?

Answer:

Yes. They can have a video chat per presentation so if they had 100 presentations they would have 100 video chats.

Melissa S.

50 pts

Is there a limit to the number of users that can participate in one video chat?

Answer:

There isn't a limit but we recommend no more than 12 users per chat.

Christine R.

20 pts

If a question is asked on a presentation on the website, does it appear in the live stream question area when the live stream is happening or does it appear after the live stream is over?

Answer:

Personal Screen Preview

eventScribe LIVE

Attendee pictures will display next to their comments.
